

Note: your work is automatically ZERO if you do not attend the defense (discussion) session

What you need to submit:

- The design document **(of phase 1)** must be fixed and updated.
- The Java implementation as NetBeans or Eclipse project

Grade distribution:

Your grade will be given based on the following:

- 1) Project defense (discussion)
- 2) Your implementation must match the documentation and the UML design diagrams
- 3) Your implementation should have a user interface to allow actors to use the system
- 4) Your implementation will be tested according to systems defined use cases.
- 5) You need to create stubs (dummy output classes) to test your outputs to things like printer or email dispatching.
- 6) Any required storage should be implemented as files

Bonus (10% of phase-2 total mark)

Find a Java library to allow you to send email messages (Just Google it!)

This bonus will be tested as follows:

1. A doctor scheduled is cancelled for some day
2. An email is generated to the patients who have emails in their files.
